Professional Summary

Ambitious Technology Architect with over 11 years of experience engineering Python-based cloud applications and serverless architectures within AWS ecosystems. Expert in application and database development, specializing in high-traffic RESTful APIs, complex data migration, and AI-driven features. Proven track record of optimizing system performance, reducing operational costs by up to 25%, and directing high-performing cross-functional teams to deliver scalable enterprise solutions.

Technical Skills

- **Programming:** Python (Expert), SQL, JavaScript, HTML5, CSS3.
- **Web Frameworks:** FastAPI, Flask, Django, RestAPI
- **Cloud (AWS):** Lambda, Glue, Aurora, RDS, EC2, DynamoDB, Redshift, S3, SNS, Athena, API Gateway, Lex, Secrets Manager.
- **Tools & Platforms:** Docker, Kubernetes, Git, GitLab, JIRA, Confluence, OpenAPI/Swagger.
- **Databases:** PostgreSQL, MySQL, MongoDB.
- **Data Libraries:** NumPy, Pandas.
- **Security:** OAuth 2.0, JWT, OpenID connect

Core Competencies

- Microservices, Serverless, API Development, Data Engineering, Leadership.

soft skills

- Leadership, Collaboration, Decision-making, Adaptability, Continuous learning, Strategic thinking

Professional Experience

Wipro (Client: Abbott Laboratories), Pune

Technology Architect, 04/2025 – Present

- Spearheaded the design of serverless backend architectures using AWS Lambda and FastAPI, reducing p95 latency by 40% for 50,000+ daily pharmaceutical sales requests.
- Engineered "**Smart Rep**" API modules providing real-time sales growth analytics, achieving 99.9% data accuracy across MTD, YTD, and QTD metrics for pharmaceutical

sales executives.

- Designed and implemented **OLTP and OLAP** data models to support transactional application workflows as well as analytical workloads, enabling efficient aggregation and reporting of sales-representative usage, session activity, engagement, and growth trends.
- Developed an **admin analytics dashboard** for business stakeholders to monitor sales-representative adoption, session patterns, usage metrics, and growth KPIs, leveraging OLAP datasets for efficient analytical queries and reporting.
- Orchestrated the migration of 10TB+ healthcare datasets using AWS Glue and Redshift, ensuring 100% data integrity and reducing ETL processing time by 30%, while optimizing data pipelines for downstream analytical workloads.
- Conceptualized and launched AI-driven "**SmartLearn**" features using LangChain to automate policy-compliant documentation and dynamically surface relevant product dosage information.

Larsen & Toubro (Client: Sky Media), Pune

Technology Lead, 05/2020 – 03/2025

- Architected an automated network device configuration platform from scratch, replacing manual field-visit workflows and reducing operational effort by 90%, while defining **data models, data mapping, and NoSQL architecture** for scalable device and network configuration workflows.
- Directed a cross-functional team of 8 developers, achieving an 85% on-time delivery rate and increasing team velocity by 25% through CI/CD integration, while establishing **data mapping and integration strategies** across application services, MongoDB, and SQL-based systems.
- Implemented robust deployment pipelines using Docker and Kubernetes, ensuring 99.9% system uptime and seamless horizontal scalability across AWS CloudWatch, while supporting a **distributed NoSQL architecture with MongoDB sharding and replication** for scalability and high availability.
- Streamlined database operations using **MongoDB and SQL connectors**, performing **sharding, indexing, query optimization, and replication** configuration to improve database performance, scalability, and reliability while reducing production downtime.

Accenture (R & D department), Pune

Senior Software Engineer, 11/2019 – 05/2020

- Programmed a Django-based promotional email automation system, increasing user engagement tracking accuracy for global R&D initiatives.
- Formulated and executed data migration scripts from DB2 to MySQL for 500,000+ financial records, maintaining 100% data consistency.
- Automated internal auditing processes by automating manual data entry functions, saving approximately 15 hours of manual labour per week.

Tata Consultancy Services (Client: Morgan Stanley), Pune

IT Analyst (Customer: Morgan Stanley), 03/2015 – 11/2019

- Streamlined portal access request workflows by automating a manual email-based authorization system, reducing fulfillment time for 100+ daily users, while supporting **ETL/ELT workflows for extracting, transforming, and loading data** across application systems.
- Optimized MySQL database schemas for migrated financial data, resulting in a 30% improvement in query response times, while performing **data transformation, mapping, validation, and loading** as part of database migration workflows.
- Collaborated with QA teams to implement comprehensive test plans, reducing production bugs by 20% through rigorous debugging and unit testing with PyTest, including **validation of transformed and migrated data to ensure data quality and consistency across source and target systems**.

Certifications

- **AWS Cloud Practitioner Essentials**, AWS
- **PMP Exam Prep: Gaining Business Acumen**, Coursera
- **Foundations: Data, Data, Everywhere**, Google
- **Application Development using Microservices and Serverless**, IBM
- **Leadership Skills**, IIMA – IIM Ahmedabad

Education

- **Bachelor of Technology (ECE)**, UPTU, 2010 – 2014
